

Figma Shortcuts Cheat Sheet

The Figma keyboard shortcuts UI/UX designers, beginners, and students use most, with Windows and Mac keys side by side.

WIN Windows: Ctrl · Alt · Shift

MAC Mac: ⌘ Cmd · ⌥ Option · ^ Control · ⇧ Shift

5 Shortcuts Every Beginner Should Learn First

1. Duplicate

WIN Ctrl + D

MAC ⌘ + D

Copy a layer in place instantly.

2. Group

WIN Ctrl + G

MAC ⌘ + G

Keep related layers together.

3. Frame

WIN F or A

MAC F or A

Draw a screen or container.

4. Auto Layout

WIN Shift + A

MAC ⇧ + A

Make layouts stack and resize.

5. Search / Quick Actions

WIN Ctrl + /

MAC ⌘ + /

Find any command by name.

1 Basic Shortcuts

ACTION	WINDOWS	MAC	WHAT IT DOES
Copy	Ctrl + C	⌘ + C	Copies the selected layers.
Paste	Ctrl + V	⌘ + V	Pastes into the selected frame, or the canvas.
Duplicate	Ctrl + D	⌘ + D	Copies and pastes in one step, right next to the original.
Undo	Ctrl + Z	⌘ + Z	Reverses the last change.
Redo	Ctrl + Shift + Z	⌘ + ⇧ + Z	Restores a change you just undid.
Save to version history	Ctrl + Alt + S	⌘ + ⌥ + S	Figma autosaves; this adds a named checkpoint you can restore.
Select All	Ctrl + A	⌘ + A	Selects every layer at the current level.
Deselect	Esc	Esc	Clears the current selection.
Search (find in file)	Ctrl + F	⌘ + F	Finds layers and text by name or content.

2 Navigation

ACTION	WINDOWS	MAC	WHAT IT DOES
Zoom In	Ctrl + + or +	⌘ + + or +	Zooms in on the canvas.
Zoom Out	Ctrl + - or -	⌘ + - or -	Zooms out on the canvas.
Zoom to 100%	Shift + 0	⇧ + 0	Shows the design at actual size.
Zoom to Selection	Shift + 2	⇧ + 2	Fits the selected layers to the screen.
Zoom to Fit	Shift + 1	⇧ + 1	Shows everything on the current page.
Pan Canvas	Space + drag	Space + drag	Hold Space to move around without selecting anything.

3 Layers & Objects

ACTION	WINDOWS	MAC	WHAT IT DOES
Group	Ctrl + G	⌘ + G	Combines selected layers into one group.
Ungroup	Ctrl + Shift + G	⌘ + ⇧ + G	Breaks a group back into separate layers.
Bring Forward	Ctrl +]	⌘ +]	Moves the layer up one step.
Send Backward	Ctrl + [	⌘ + [	Moves the layer down one step.
Bring to Front	]	]	Moves the layer to the top of its parent.
Send to Back	[	[	Moves the layer to the bottom of its parent.
Lock / Unlock	Ctrl + Shift + L	⌘ + ⇧ + L	Stops a layer from being selected or moved by accident.
Hide / Show	Ctrl + Shift + H	⌘ + ⇧ + H	Toggles layer visibility.
Rename	Ctrl + R	⌘ + R	Renames the selected layer.

4 Alignment

ACTION	WINDOWS	MAC	WHAT IT DOES
Align Left	Alt + A	⌘ + A	Lines up left edges.
Align Center	Alt + H	⌘ + H	Centers layers horizontally.
Align Right	Alt + D	⌘ + D	Lines up right edges.
Align Top	Alt + W	⌘ + W	Lines up top edges.
Align Middle	Alt + V	⌘ + V	Centers layers vertically.
Align Bottom	Alt + S	⌘ + S	Lines up bottom edges.
Distribute Horizontally	Alt + Shift + H	⌘ + ⇧ + H	Equal horizontal spacing between 3+ layers.
Distribute Vertically	Alt + Shift + V	⌘ + ⇧ + V	Equal vertical spacing between 3+ layers.

5 Frames & Components

ACTION	WINDOWS	MAC	WHAT IT DOES
Create Frame	F or A	F or A	Frame tool. Draw a screen, card, or section.
Frame Selection	Ctrl + Alt + G	⌘ + ⌘ + G	Wraps selected layers in a new frame.
Create Component	Ctrl + Alt + K	⌘ + ⌘ + K	Turns the selection into a reusable component.
Detach Instance	Ctrl + Alt + B	⌘ + ⌘ + B	Breaks the link to the main component.
Swap Component	Alt + drag from Assets	⌘ + drag from Assets	Drop onto an instance to swap it, keeping overrides.
Create Auto Layout	Shift + A	⇧ + A	Adds Auto Layout to a frame or wraps the selection in one.
Remove Auto Layout	Alt + Shift + A	⌘ + ⇧ + A	Removes Auto Layout and keeps layers in place.
Add Component Variant	No default key	No default key	Select the component, then click + Add variant in the right panel.

6 Text

ACTION	WINDOWS	MAC	WHAT IT DOES
Create Text	T	T	Text tool. Click to type, or drag for a fixed-width box.
Bold	Ctrl + B	⌘ + B	Makes text bold.
Italic	Ctrl + I	⌘ + I	Makes text italic.
Underline	Ctrl + U	⌘ + U	Underlines text.
Text Alignment	Ctrl + Alt + L T R	⌘ + ⌥ + L T R	Align text left, center, or right.

7 Design & Prototyping

ACTION	WINDOWS	MAC	WHAT IT DOES
Prototype mode	Shift + E	⌥ + E	Switches the right panel between Design and Prototype.
Add interaction	Drag the + node	Drag the + node	In Prototype mode, drag from a layer to the destination frame.
Create component	Ctrl + Alt + K	⌘ + ⌥ + K	Reusable buttons and cards keep prototypes consistent.
Preview prototype	Shift + Space	⌥ + Space	Opens an inline preview next to the canvas.
Present design	Ctrl + Alt + Enter	⌘ + ⌥ + Return	Plays the prototype full-screen in a new tab.

8 Useful Figma Actions

ACTION	WINDOWS	MAC	WHAT IT DOES
Quick Actions	Ctrl + / or Ctrl + K	⌘ + / or ⌘ + K	Opens the command search bar.
Rename layers	Ctrl + R	⌘ + R	With several layers selected, batch-renames them at once.
Search commands	Ctrl + /	⌘ + /	Type a command name, e.g. "flatten", and press Enter.
Find components	Alt + 2	⌥ + 2	Opens the Assets panel to search your components.
Find styles	Ctrl + / + style name	⌘ + / + style name	Search color, text, and effect styles from Quick Actions.
Show / hide panels	Ctrl + \	⌘ + \	Hides the UI for a clean, distraction-free canvas.
All shortcuts	Ctrl + Shift + ?	⌘ + ⌥ + ?	Opens Figma's built-in keyboard shortcuts panel.

Figma Productivity Tips

Use Auto Layout early

Build cards, buttons, and lists with Auto Layout from the start so they resize with content.

Use components for repeated UI

Edit the main component once and every instance updates.

Learn keyboard shortcuts gradually

Master the five beginner shortcuts first, then add two or three new ones each week.

Name layers properly

"Button / Primary" beats "Rectangle 42". Clean names make handoff and prototyping easier.

Use consistent spacing

Stick to an 8-point scale (8, 16, 24, 32) for padding and gaps.

Use Quick Actions when you forget

Press Ctrl + / (⌘ + / on Mac) and type what you want to do. The shortcut is shown next to it.

Shortcuts can vary with keyboard layout and Figma updates. Check the current list anytime in Figma under Help → Keyboard shortcuts.
